Project Name :

JobInternDesk

Project Concept Note

Project Introduction

Now a days, we know that searching of jobs is so difficult in proficient areas. Job portal service was developed for creating an interactive job vacancy form for candidates. It's unique development methodology helps in acquiring the client and candidate information and separating them according to the job requirements and vacancies. This web application manage updates both from the job seekers as well as the companies.

Project Objective

The online Job Portal System named *JobInternDesk* that is to be developed provides the members with jobs information, online applying for jobs and many other facilities. This system provides service to the job applicants to search for working opportunities. Job Portal will allow job provider to establish one to one relationships with candidates. This system is designed such that ultimately all vacancies will be posted online and would offer users the facilities to search for vacancies online. It helps to review and manage the resulting applications efficiently through the web. User can get resolved with instant queries via chatbot.

Project Goals

- Designing UI for JobInternDesk (website).
- Integrating the chatbot with the website.
- Ensuring the front-end responsiveness.

Project Implementation

1. **Project planning**
   - To work on project from the scratch, we define the goals and objectives of our JobInternDesk website.
   - We try to understand the needs of users and determine the features and functionalities which are to be included.
   - Finally we create a project timeline

2. **Designing a job portal user interface(UI)**
   - The main purpose of this is to design a user friendly landing page for every user using HTML, CSS, and JavaScript.

- Landing page consists of Job search and internships search sections where users can search for desired jobs.
- It also contains a section to explore Jobs/Internships based on category.
- Users can find the reviews of our clients/users.
- And ensure designed UI is a responsive and poses intuitive navigation.

3. **Chatbot Integration**
   - After designing landing page we considered to add chatbot to help out users for minute queries instantly.
   - We design the conversation flow and define the intents and entities for the chatbot and customize the chatbot's responses based on the needs of job portal.

4. **Hosting Website**
   - We will host the developed front-end website.
